ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: METHOD AND SYSTEM FOR UNEVEN DISTRIBUTION OF DATA

(57) Abstract: Method to transmit streamed information at a wireless tele- and data communication network by transmitting streamed high prioritized information via a secure medium, whereas low prioritized data are transmitted over a standard channel. The method is a combination of two technologies, MMS and Streaming, to guarantee that the video client in the mobile terminal has access to high prioritized data on right occasion. By using MMS as an initial notification for the medium. In the message just any amount of high prioritized information can be enclosed, for instance any number of I-frames. The video client in this way has a lead at the video decoding, and the streaming protocol will have more time to secure that the rest of data actually will get through.
